

Omega Extension

Customized Purification for Every Need

The **Omega Extension** by **TipaTech** was developed to meet the growing demand for tailored water-filtration solutions. Each customer has unique water conditions, and the Omega platform allows us to customize and optimize performance accordingly.

By integrating the **Omega Extension**, water pH is balanced, and key contaminants are significantly reduced — including chemicals, limescale, unpleasant tastes and odors, and various organic compounds. The system is ideal for **residential, restaurant, and small industrial** applications.

Expandable Performance with the T-18

The Omega is designed as an **add-on module** for the **T-18 Whole-House Filtration System**. By connecting one or more Omega units, the purification capacity of the T-18 can be expanded to achieve enhanced results.

For example:

- The standard T-18 reduces up to **99% of limescale inside pipes** and up to **50% outside**.
- When combined with the Omega Extension, it achieves up to **99% limescale reduction both inside and outside** the plumbing system.
- Performance improvements can be achieved for **chemical residues, pharmaceuticals, agricultural sprays** (such as arsenic compounds), and other contaminants.

Technical Specifications

- **Connection sizes:** ¾", 1", or 1.5"
- **Filtration level:** 20 microns
- **Dimensions:** Height 59 cm / Diameter 12 cm
- **Installation key:** 16 cm
- **Flow rate:** Up to 15 m³/h
