

TIPATECH

The Future of Water, at Your Fingertips

Discover TipaTech Water Filtration Systems - innovative, eco-conscious solutions engineered to bring cleaner, healthier water to every tap in your home. Combining advanced filtration technology with a sustainable design, TipaTech systems provide powerful protection against a wide spectrum of contaminants - giving you and your family peace of mind with every drop.

WHY TO CHOOSE TIPATECH WATER SYSTEMS?

ECO-FRIENDLY DESIGN

Our systems effectively filter out impurities while retaining and adding the necessary minerals for optimal body function, with zero water waste and zero energy consumption.

ALL-IN-ONE EXCELLENCE

It's a state-of-the-art, all-in-one systems, designed to be the most efficient, healthy, and environmentally friendly water solution available.

PROVEN RELIABILITY

Supported by leading international laboratories and IAPMO R&T, UPC compliance to the following standards:

- NSF/ANSI 42 • NSF/ANSI 61 • NSF/ANSI/CAN 372-2022

GLOBAL TRUST

Trusted by families and businesses worldwide, both systems are renowned for its superior performance and reliability.

INTERNATIONAL RECOGNITION

TipaTech has been honored with an International Platinum Medal, reflecting its superior performance and innovation.

UNMATCHED FILTRATION CAPABILITIES

- **Unique Air and Gas Treatment:** Our systems are the only filtration systems globally that effectively treat air and oxygen-derived gases, ensuring a purer water experience.
- **Lead Reduction:** They are uniquely designed to reduce lead leakage coming from both the water supplier and the internal pipes.
- **Advanced Scale Reduction:** Condition water to reduce up to 99% of limescale in all pipes and tanks without chemicals or softeners, while preserving essential minerals.
- **Contaminant Reduction:** Efficiently reduce agricultural chemicals, and medications that may contaminate groundwater.
- **Micro-Filtering:** Filter water effectively treating intestinal parasites (like Giardia), reducing rust, red water, microplastic fibers and more, thanks to their dense filter networks.
- **Fluoride Reduction:** Decrease Fluoride levels up to 99%.
- **Bacteria Reduction:** Reduce aerobic bacteria in the water.
- **Optional Magnesium Enhancement:** Adds Mg+2 ions at 60 mg/L, optional for enhanced water quality and health benefits.

PROVEN RELIABILITY AND INNOVATION

- **Trusted by Thousands:** The TipaTech systems are relied upon by families around the world for its dependable performance and effectiveness.
- **Innovative Technology:** By choosing TipaTech, you're embracing cutting-edge technology that enhances your quality of life.
- **Support and Training:** We offer comprehensive technical support.
- **Limited Warranty:** Enjoy peace of mind with our Limited Warranty, ensuring long-term reliability and customer satisfaction.

product

Conditioning the Water

The T-18 Water Filtration System conditions your home's water, reducing dry skin and hair while ensuring softer laundry—without the use of chemicals.

Fights Parasites & Aerobic Bacteria

Reduces aerobic bacteria and parasites such as Giardia in the water.

Enhanced Water Filter

Filters water down to one micron, effectively treating intestinal parasites, rust and harmful micro-plastic fibers.

Decreases Lead Exposure

Reduces lead levels from your water supply, providing safer, cleaner water for your home.

Reduces Scale

Reduces up to 99% of scale deposits in pipes and tanks, enhancing water flow and prolonging the lifespan of your plumbing system.

Unique Patent

The only water filtration system globally that releases air and oxygen-derived gases while effectively reducing lead leakage from pipes and connectors inside your home.

Easy installation and maintenance

The TipaTech T-18 is a small and smart water system designed specially to make installation and maintenance simple.

Eco-Friendly system

The T-18 is an eco-friendly system that conserves water, requires no electricity, softeners, or salt and produces safe water for irrigation or natural ground absorption.

HOW IT WORKS?

STAGE #1 AIR RELEASE

The Air-Release releases air and harmful gases such as radon from the water which can be inhaled during activities like showering. This step also reduces aerobic bacteria growth, aids in reduces corrosion, lead leakage and limescale buildup in pipes and connectors.

STAGE #2 SEMI PRECIOUS METAL

Water passes through semi-precious metals, reducing limescale buildup, enhancing water flow, improving heat transfer efficiency, reducing maintenance costs, lowering chlorine levels and decreasing heavy metals in the water.

STAGE #3 CERAMIC BALLS

Ceramic balls adsorb harmful substances like arsenic, protecting against contaminants that might appear from agriculture spraying.

STAGE #4 MG+2 (OPTIONAL)

This optional stage adds up to 60 mg/L of magnesium (Mg+2), enhancing water taste, balancing mineral content, and providing valuable health benefits.

STAGE #5 PF FILTER

Polypropylene fibers filter water down to one micron, effectively reducing parasites like Giardia and micro-plastic fibers for pure, contaminant-free water.

STAGE #6 MULTI MAGNETIC SLEEVE

The water passes through a pure silicone sleeve containing Neodymium magnets, creating a magnetic field that clusters light metals like Calcium, Magnesium, and Ferrum and therefore can be stopped by the PF filter. This process reduces red water from entering into our homes.

STAGE #7 JET

The next two maintenance stages ensure optimal performance and water quality. In the seventh stage, a jet centrifuges the water, flushing out accumulated contaminants in the system.

STAGE #8 FLUSHING FAUCET

The flushing faucet allows easy removal of accumulated contaminants without disassembling the filter (automatic flush is optional).
